                                                                                                                                                                                            the replication of chromosome termini in most eukaryotes. It elongates telomeres. It is a reverse transcriptase that adds simple sequence repeats to chromosome ends by copying a template sequence within the RNA component of the enzyme. SUBUNIT: Component of the telomerase ribonucleoprotein complex at least composed of TEP1, EST1A, POT1 and a telomerase RNA template component (TER). Interacts with PINX1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Telomerase is a ribonucleoprotein enzyme essential

The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae motif peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Frameshift frequency; aberrant transcript degradation; peptidyl transferase modulation; beta-thalassaemia; beta-globin; puchenne/Becker Muscular Dystrophy; Haemophilia B; Haemophilia B; Souther Dystrophy; Haemophilia B; Haemophilia B; Souther Berast Cancer; Von Willebrand Disease; Osteogenesis Imperfecta; Breast Cancer; Ovarian Cancer; Wilms Tumour; Hirschsprung disease; Cystic fibrosis; Kidney Stone; Familial hypercholesterolaemia; Retinitis Pigmentosa; Neurofibromatosis; Retinoblastoma; ATM; Costmann Disease; yeast.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC the RNA helicase MTII with a composition or agent under conditions
CC permitting binding between the MTII and the composition, detecting
CC specific binding of the test composition or agent to the MTII. The
CC determining if the test composition or agent to the MTII. The
CC composition and methods are useful for modulating the fidelity of
CC translation termination or for identifying agents that: affect the
CC translation activity of mRNAs by altering frameshift frequency, permit
CC monitoring of a termination event, promote degradation of aberrant
CC transcripts, and provide modulators (inhibitors/stimulators) of peptidyl
CC transferase activity during initiation, elongation, termination and mRNA
CC degradation of translation. The agents, which may be antagonists or
CC agonists, are useful in screening, diagnostic and therapeutic purposes,
CC for diseases or conditions resulting from or cause premature translation,
CC such as beta-thalassaemia, beta-globin, buchemne/Becker Muscular
CC pystrophy, Haemophilia A, Haemophilia B, Von Willebrand Disease,
CC Hirschsprung disease, Cystic fibrosis, Kidney Stones, Familial
CC hypercholesterolaemia, Retinitis Pigmentosa, or Neurofibromatosis,
CC the amino acid sequence of the yeast translation termination modulation
CC profesis mortif II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                     New multiprotein complex which can modulate peptidyl transferase activity during translation, useful to treat diseases associated with peptidyl transferase activity e.g. Duchene/Becker Muscular Dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Helicase B; HCSB; MTT1; modulator of translation termination; eRF1; eRF3; eukaryotic release factor; peptidyl transferase; beta-thalassemia; beta-globin; Duchene/Becker Muscular Dystrophy; antianemic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   31-MAY-2000 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 14 AA;

CC transferase activity, especially diseases resulting from a nonsense or compensation e.g. beta-thalassemia, beta-globin, Duchene/Becker CC frameshift mutation e.g. beta-thalassemia, beta-globin, Duchene/Becker CC involving a defect in the complex, by transferting cells with encoding cc and after transferase activity disease conditions complex of defective complex before cc and after transferase activity during translation, inhibiting the peptidyl transferase activity during translation, inhibiting the complex expression and so modulate the efficiency of interaction between MTI and eRE3 or involved in enhancing translation cc termination. Vectors comprising polynucleotides encoding the complex (or contribute equation) and so modulate the efficiency of contributes in a cell. Agents binding to the complex can be identified complex capteression and so modulate the efficiency of combinate peptidyl transferase activity during translation in cells. They care also useful to modulate the efficiency of translation of aberrant cc are also useful to modulate the efficiency of translation of aberrant cc compositions modulate the efficiency of translation facels. They care also useful to modulate the efficiency of translation of aberrant cc compositions modulate the efficiency of translation termination of compositions modulating binding to MTI, useful to identify agents of interact. used for modulating ranslation facels in the genes of interact.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The complex comprises the gene encoding Helicase B (HCSB; renamed MTT1, for Modulator of Translation Termination) and the conserved proteins known to interact an carry out translation termination in eukaryotic cells, peptidyl eukaryotic release factor (eRF) 1 and eRF3. The complex can be used to modulate peptidyl transferase activity during translation in a cell. It can be administered therapeutically combined with a carrier in pharmaceutical compositions to treat diseases associated with peptidyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Helicase B; HCSB; MTT1; modulator of translation termination; eRF1; eRF3; eukaryotic release factor; peptidyl transferase; beta-thalassemia; beta-globin; Duchene/Becker Muscular Dystrophy; antianemic; yeast;

The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae UPF1 (otherwise termed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying an agent that increases nonsense suppression, for antiviral therapy, by contacting modulator of translation termination (Mttl) in Saccharomyces cerevisiae with a test agent, and detecting specific binding to Mttl.
Identifying a test composition or agent that modulates the efficiency of translation termination comprises contacting the MTT1 with the test composition or agent, and determining if the test composition or agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADP44131 standard; protein; 380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 380

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CT The invention relates to a method of identifying a test composition that CC modulates the efficiency of translation termination comprising contacting CC the RNA helicase MTT1 with a composition or agent under conditions CC permitting binding between the MTT1 and the composition, detecting CC specific binding of the test composition or agent inhibits the MTT1. The CC composition and methods are useful for modulating the fidelity of translation termination or for identifying agents that: affect the CC functional activity of mRNAs by altering frameshift frequency, permit CC functional activity during initiation; elongation, termination event, promote degradation of aberrant CC transcripts, and provide modulators (inhibitors/stimulators) of peptidyl C transferase activity during initiation, elongation, termination and mRNA C degradation of translation. The agents, which may be antagonists or CC agonists, are useful in screening, diagnostic and therapeutic purposes, CC for diseases or conditions resulting from or cause premature translation, cs. Such as beta-thalassaemia, beta-globin, Duchenne/Becker Muscular CC pystrophy, Haemophilia A, Haemophilia B, Von Willebrand Disease, Cystic fibrosis, Kidney Stones, Familial Tumour, CC Hirschbgrung disease, Cystic fibrosis, Kidney Stones, Familial Tumour, CC Retinoblastoma, ATM or Costmann Disease. The present sequence represents ct the amino acid sequence of the yeast helicase Upfi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC having an improved property comprises transforming a plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plants with CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC concreased resistance to plant disease, better growth rate by modification CC of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of carbohydrate, nitrogen or CC content, improved yield by modification of carbohydrate, nitrogen or CC content, improved plant growth and development under at least one stress CC condition, improved plant growth and development under at least one stress CC condition. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not CC form part of the printed specification but was obtained in electronic CC format from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant
                                                                                                                                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                22-OCT-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the untiliserious fe has activities with the content of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end cc sequence and an oligonucleotide comprising a sequence complementary to a complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a complementary to a complementary to a complementary strands of the strands of the comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in cc gene therapy. The primers are useful for synthesising polynucleotides, gene therapy full-length cDNAs. The primers are also useful for the cetection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH303166 to AAH13628 and CC collegent human amino acid sequences; and AAH13629 to AAH13632 represent colligonucleotides, all of which are used in the exemplification of the

They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ABR58324-ABR58345 represent known polypeptides encoded by polynucleotides that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            differentially-regulated in breast cancer. The methods and compositi of the present invention are useful for detecting, diagnosing, stagimonitoring, prognosticating, preventing and/or treating diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast
          New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mecrenal disease, or demyelinating diseases of the central or periph

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathles and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, archivities and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to polynucleotides (AAK51456-AAK51435) and the encoded polypeptides (AAM7823-AAM80302) that exhibit activity elating to cycokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and crivity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

                                                                                                                                                                                                                                                                                                                                                                       The nonsense-mediated mRNA decay pathway has an important role in the clear degradation of mRNA transcripts that contain a stop codon. The products of the UPP1 and UPF3 genes (proteins Upf1p and Upf3p, respectively) are essential components of this pathway. Mutations in these genes or chibition of Upf1p or Upf3p function would lead to stabilisation of mRNA containing premature stop codons. The present sequence is the UPP1 crom Saccharomyces cerevislae. The carboxy terminal of the NMD2 gene protein, Nmd2p, has been found to bind to Upf1p, leading to the NMD2 gene protein, Nmd2p, has been found to bind to Upf1p, leading to the MMD2 gene protein, seediated mRNA decay pathway. Inhibition of this gathway is a useful means of treating disorders caused by the cromatous of nonsense mutations, e.g. breast cancer, polycystic kidney consense, Niemann-pick disease, adenomatous polyposis coli, cystic consenses, Niemann-pick disease, meurofibromatosis, ornithine transcarbamylase deficiency, retinoblastoma, consenses, McArdle disease, colorectal cancer, Tay-Sachs consenses, McArdle disease, colorectal cancer, Tay-Sachs consenses, McArdle disease, colorectal cancer, Tay-Sachs colorenses, Mayerophy, adrenocortical carcinoma, Li-Fraumeni syndrome, Maple syrup urine disease, Turcot syndrome or beta-thalassaemia
                                                                                                                                                                                                            Query Match 71.1%;

US/09359268A

GENERAL INFORMATION: Sequence 2, Application Patent No. 6630294

APPLICANT: Peltz, Stuart
APPLICANT: Czaplinski, Kevin
APPLICANT: Dinman, Jonathan D.
TITLE OF INVENTION: THE FIDELI
TITLE OF INVENTION: THEREOF

O

A SUBFAMILY OF RNA HELICASES WHICH ARE MODULATORS OF THE FIDELITY OF TRANSLATION TERMINATION AND USES

```
FILE REFERENCE: 601-1-85N
CURRENT APPLICATION NUMBER: US/09/359,268A
CURRENT FILING DATE: 1999-07-22
PRIOR APPLICATION NUMBER: 60/093,685
PRIOR FILING DATE: 1999-07-22
PRIOR FILING DATE: 1999-07-22
NUMBER OF SEQ ID NOS: 32
SOPTWARE: PATENTLE PATENTS OF SEQ ID NO 2
LENGTH: 14
TYPE: PRT
ORGANISM: Saccharomyces cerevisiae
APPLICANT: Peltz, Stuart
APPLICANT: Czaplinski, Kevin
APPLICANT: Czaplinski, Kevin
TITLE OF INVENTION: A SUBFAMILY OF RNA HELIC
TITLE OF INVENTION: THE FIDELITY OF TRANSLAT
TITLE OF INVENTION: THEREOF
